

# SL-450 Crime Scene Light

**Projectina** and its partners share the same vision as every Crime Scene Examiner in the world – to make society a safer place.

We work hard to push the boundaries of technology and provide support to help solve and prevent crime. We believe every crime has a story to tell and we want to help tell that story so crimes can be solved, criminals convicted, and victims can rebuild their lives.

Quickly finding physical and trace evidence as you process your crime scene is key to kicking off an effective investigation. The crime scene light you use can make a huge difference to the quality of evidence collected and the time it takes to work a scene.

The SL-450 can help you take crime scene investigation to a new level.

- ✓ **One light does it all** – instead of carrying 8 individual lights the SL-450 is a single unit with 7 built-in filter settings giving you everything you need to work the crime scene.
- ✓ **Less to carry to the scene** – the SL-450 is significantly lighter and smaller than the other crime scene lights being used around the world. This means your crime scene kit is easier to transport and handle.
- ✓ **You can repair it in the field** – unlike other crime scene lights, you can repair the SL-450 in the field if the bulb breaks meaning you will always have the tool you need to work the scene.
- ✓ **Recharge on the move** – the battery lasts for 90 minutes and the SL-450 comes with two, so you can recharge one while you're working the scene with the other. This means you can have 100% availability to work a scene for as long as it takes.

# They've already adopted **SL-450**

The SL-450 is being used by more than 90 Law Enforcement agencies in over 30 countries worldwide.

**30**  
COUNTRIES

**90**
