

Forensic magnifier

The Forensic magnifier can be used to verify ID-documents, but is also very suitable to check security features in valued documents such as money or source documents. The compact magnifier has a magnification of 10x and is equipped with incident light, oblique and UV-A light.

The magnification can help you better control various security features in documents.

The magnifier is equipped with incident light and oblique light, which you can use to investigate various printing and security techniques such as microtext, offset and plate printing.

The illuminated magnifier with UV-A light can make UV inks and other UV security features visible.

Thanks to the ergonomic shape and the firm buttons the magnifier is durable and pleasant to use.

The magnifier comes with a rechargeable battery.
